

Metallic protection tube thermocouple

Model : R110 series

Spec. sheet no. RD01-01

Service intended

Protection tube type thermocouple is constructed with the insulator which insulates the element wire, and with the protection tube which protects the insulator. To install this thermocouple on the process pipe or on the container, it normally attaches to a connector, a flange, or a compression fitting on the protection tube. It can be manufactured as it is required for its use. As its special features, it does not have any resistance issues with a lead wire, and its immediate response to a temperature change leads to a less error rate of temperature change in a broad range.
